

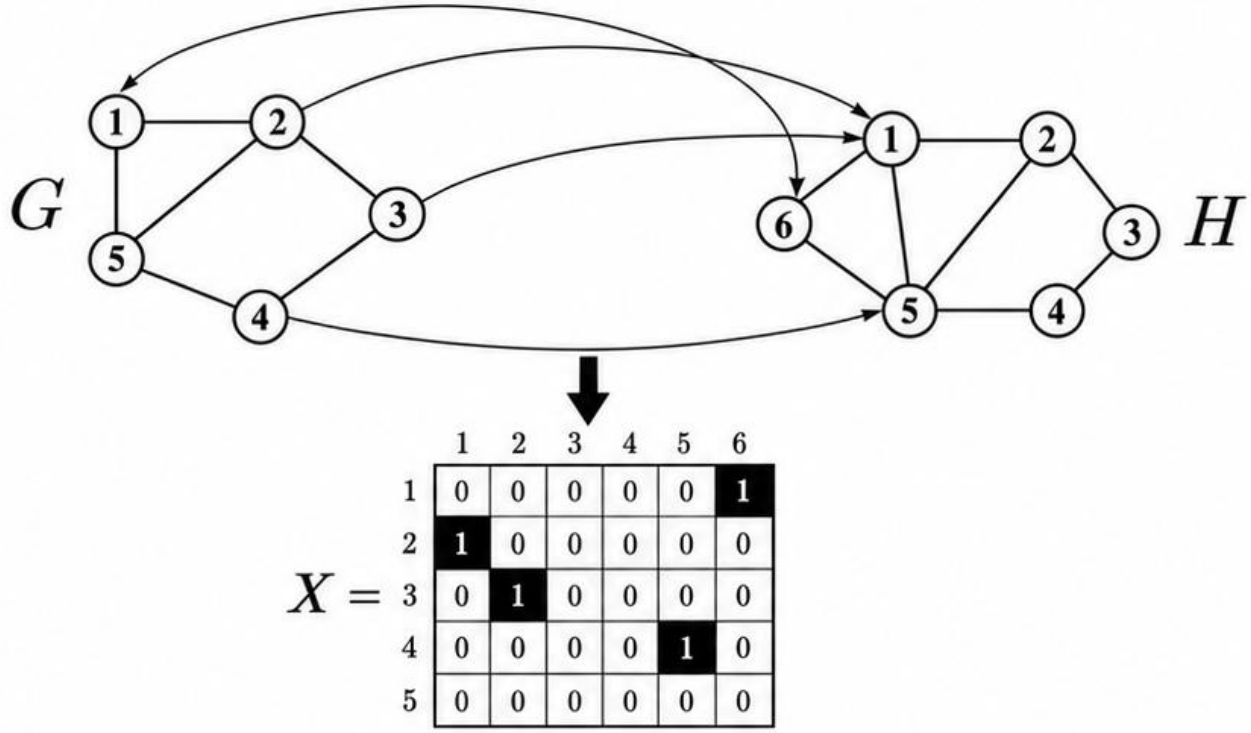

Fig. 1. Matching $L = 4$ vertices between the graphs G and H with size $M = 5$ and $N = 6$. The black box and white box in $\mathbf{X}$ mean 1 and 0, respectively.

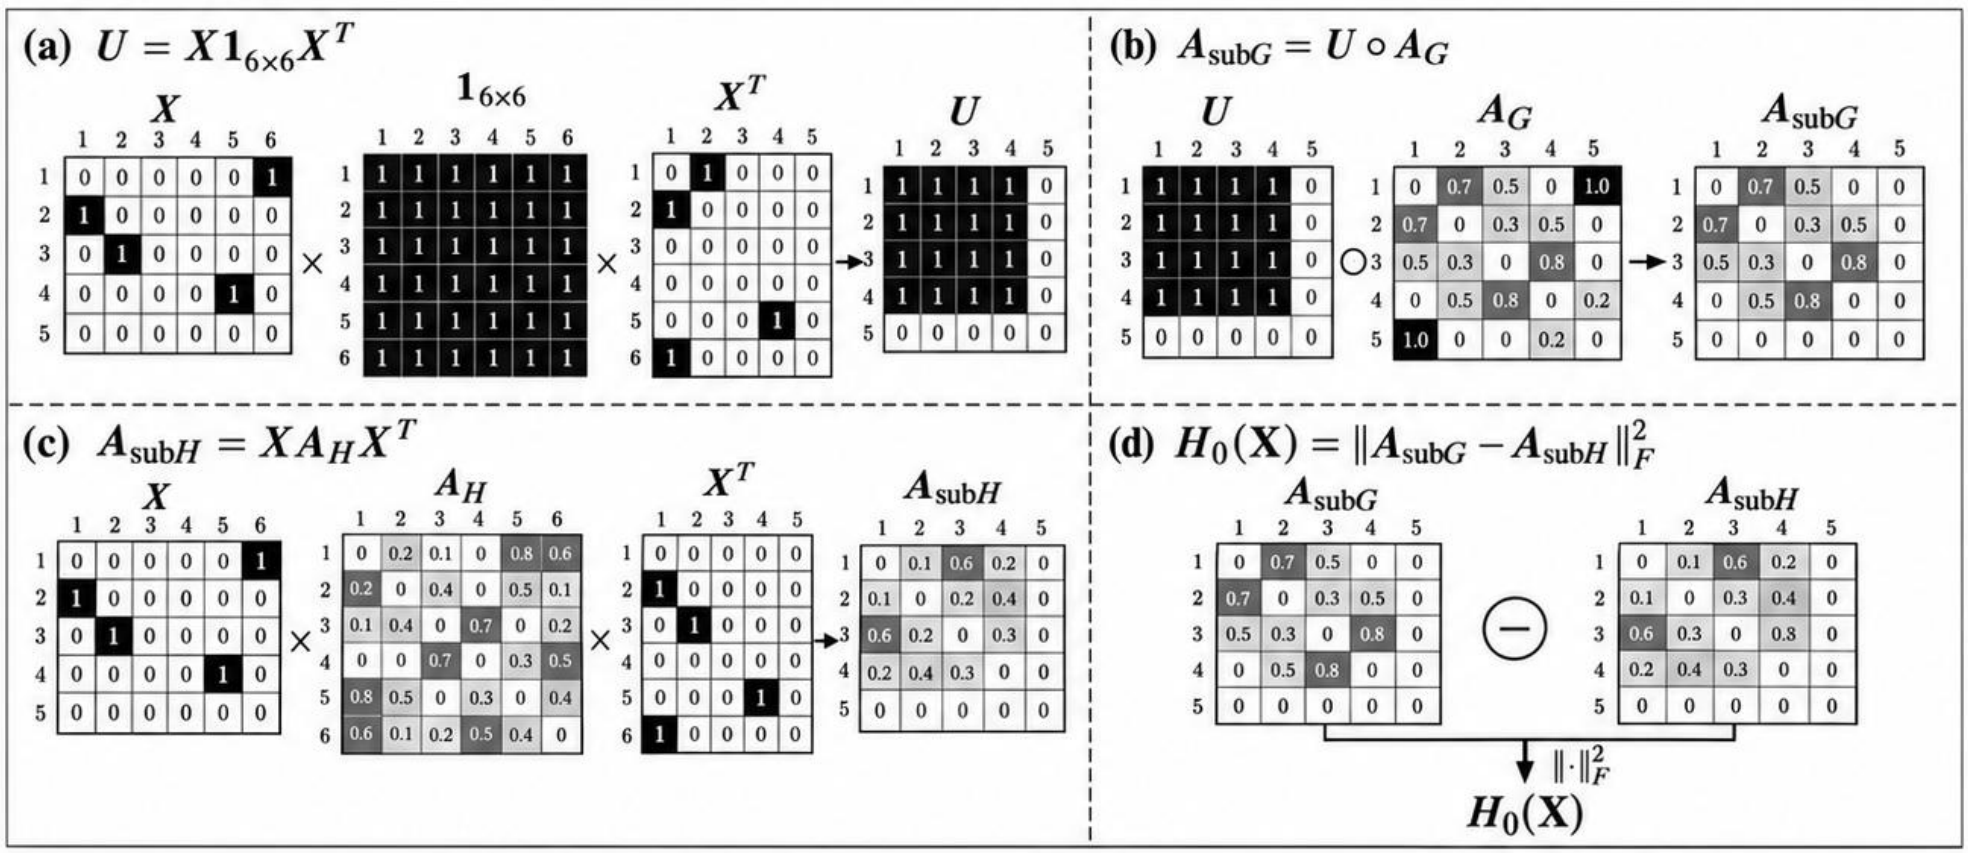

Fig. 2. Graphic description for the objective. Here, $M = 5$, $N = 6$, and $L = 4$. $A_{\text{sub}G}$ and $A_{\text{sub}H}$ denote the adjacency matrices for the subgraphs from G and H, respectively. (a) $U = X\mathbf{1}_{N\times N}X^T$. (b) $A_{\text{sub}G} = U \circ A_G$. (c) $A_{\text{sub}H} = XA_HX^T$. (d) $H_0(\mathbf{X}) = \|A_{\text{sub}G} - A_{\text{sub}H}\|_F^2$
